# CCD Design

We are a consultancy that puts the science of ergonomics and human factors at the heart of the complex buildings, workspaces and products it creates. The consultancy uses its knowledge of how people interact with their environment to design better, more effective spaces and products.

Our team brings together a unique blend of disciplines with architects, interior designers and industrial designers working alongside ergonomists and psychologists.

Our design philosophy is based on the human. Any design, product or built environment, has to serve the people it was intended for. We believe that the application of ergonomics within design is an approach that increases the probability of success. It gives a voice to the user and it brings a knowledge of human behaviour and their capabilities.

We use a range of methods that engage with users, acting as a bridge between them and the design team. We understand their needs within the project and gain their participation and buy-in to the design solution.

Our particular expertise lies in the design of complex buildings. These are buildings where their operation is safety or mission critical. Therefore there are greater demands on the design than would be found in other buildings: examples include control rooms, research facilities, hospitals, stadia, airports or railway stations.

We are acknowledged as a global leader in control room design, having designed more than 350 in the last 30 years.

## Some of our clients:

- Network Rail
- Siemens
- Metropolitan Police
- British Airways
- Transport for London
- Home Office
- Shell
- BNFL
- CERN
- DSA
